

Report of Industrial Visit to SAP

The Industrial visit to SAP was organised by the Dept of Computer Science to foster curiosity among students and to give the students an exposure to the work culture.

The Visit took place on 26th September 2024 and was attended by 40 students (30 from II BCA and 10 III BCA)

SAP had prepared a sequence of interactive sessions showcasing how their tech company strategically drives innovation while maintaining operational efficiency. The sessions also highlighted the various roles and collaborative efforts which have strengthened them over the years.

The students were enlightened especially about Joule SAP's Business AI tool and how AI is bringing a revolution in the way business works.

A demonstration was made to showcase the ease of app development. The students were made aware that the machines could be automated to do human repetitive work while programmers could focus on developing business logic based on customers' needs.

This visit also emphasized on the importance of being strong with fundamental concepts like data structures and to enhance programming skill which would place the students Industry ready.

Thus the Industrial Visit was a success as the students were inspired and the below is one such testimonial.

Ghuffarn, a final year (III BCA) student had this to say about the visit to SAP

“...This visit not only provided technical insights but also gave me a clear picture of how the tech industry operates. It has inspired me to further pursue a career in technology and innovation.”
